# Headphones hit the Headlines

Pioneer sets new standards in the professional DJ market once again with the **HDJ-1000**, the **coolest-looking**, highest-quality headphones available today. **Retro-styled** and made with the latest components, these headphones exceed the expectations of the world's top DJs - **Smokin' Jo** and many others have contributed to the development of this product over the past 12 months.

Combining their feedback with its own expertise, Pioneer has created a set of headphones that not only appeal to professional DJs but also to studio engineers, radio producers and other industry professionals. Home DJs and music fans who take their audio seriously will also choose the HDJ-1000s, which are sure to become as essential to users as the rest of Pioneer's groundbreaking Pro DJ range of players, mixers and other equipment.

The blend of cutting-edge technology and exceptional looks ensures that these headphones out-score the competition for usability, durability and, above all, performance. As a result, the HDJ-1000 will make headlines and dominate the market over the next decade.

## Head-turning Headphones

These funky-looking headphones will grab the attention whenever and wherever they're used. Using a stunning colour combination of jet-black and silver, the darkness of the soft-touch headband and padded ear-guards is offset by the sleek metallic housing of the hi-tech electronics. This monochrome contrast not only emphasises the boldness of the design, but also visually reinforces the clarity of the audio experience to be enjoyed.

The beauty of these headphones is matched by their functionality and flexibility. Responding to market demand, Pioneer has included a mono/stereo switch for more complete pre-fade monitoring and also ensured that each ear-piece has a swivel mechanism. This allows the unit to be twisted and turned to any position, making it ideal for DJs who simultaneously combine choosing tracks, cueing mixes and responding to the demands of the dance-floor.

## Serious Sounds

Created by DJs for DJs, these closed dynamic headphones include well-insulated pads that fully encompass each ear. The tight fit ensures that external sounds are kept out and that even low-level audio inputs are heard clearly. This is a huge advantage in a club DJ booth where, for example, some mixers have a low headphone output.

The HDJ-1000 unit offers distortion-free sound throughout the frequency range (5 to 30,000 Hz) and boasts an output sound level of 107 dB. What's more, the clarity of the bass register makes these headphones perfect for playing out in the loudest of venues.

## Lightweight, Heavy-duty

The stress-absorbing structure of the HDJ-1000 headphones makes them incredibly robust, with components like the tear-resistant material on the ear pads ensuring a longer life. But these headphones aren't heavy - they weigh just 270g and are very comfortable to wear. Their lightweight construction and unique fold-away design make them easy to carry too, as does the stylish black vinyl carrying pouch that comes as standard.

Additionally, these headphones use a special screw to hold the 1.2m coiled cable in place (3m fully stretched), so that damaged leads can be easily replaced should the need arise. Replacement accessories are available through local Pioneer Pro DJ dealers and include coiled cable, ear pads and plug adapters.

**Built to exceed the demands of pro-DJs worldwide, the HDJ-1000 headphones will attract admiring glances, provide top-quality sound and survive the rigours of DJ life for many years to come.**
